### Analysis

This accident is classed as a "Missed-mine accident" because the mine was presumably either missed during survey or during clearance. It is presumed that demining group included it in their spreadsheet of demining accidents because the area should have been cleared.

The primary cause of this accident is listed as "Other" because it is not known whether the accident occurred in an area that had been cleared or "declared safe".

The secondary cause is listed as a "Management control inadequacy" because the management of the demining group declined to make the accident details available. Although this is sometimes done to protect the Victims, in this case the Victim's name was among the limited detail made available. It is possible that the managers have chosen to avoid transparency because they are afraid that the circumstances of the accident would reflect badly on their organisation.
